Re: Application to PM-02 / PM-03 and AS program streams, Various Positions Inventory

I am applying to the PM-02/PM-03 program streams and AS administrative streams of this inventory. CBSA's mandate sits on a tension I find genuinely interesting to work inside: keep legitimate travel and trade moving while stopping what should not cross, and do both at volume, every day. That balance depends on something unglamorous that I happen to do for a living: identity established quickly and correctly, casework documented so it stands up later, and operational data clean enough to act on.

I work at IRCC's Operations Support Centre, where I resolve identity discrepancies in GCMS, triage the Data Integrity unit's national intake of identity-correction requests, and apply IRPA to information-sharing decisions every working day. CBSA enforces the same statute at the border that I apply upstream in case processing, and works the same client records in GCMS that I correct and maintain. The continuity between the two agencies' casework is the reason I am applying rather than waiting for something closer to my current desk.

On the program-delivery essentials: I execute master-record corrections (UCI merges, biometric associations and disassociations) on national client data, support biometric operations for staff at over 60 Visa Application Centres and Missions abroad across time zones, and confirm citizenship status against naturalization and revocation records, citing documentation for downstream officers. On the administrative and reporting side: in a concurrent research role I author the team's consolidated SOP and compliance checklist, maintain a regulatory change log, and write the briefing notes that go to senior management. I also run Excel pivot analyses and build Power BI dashboards on large operational datasets, and I am currently completing the Google Data Analytics Professional Certificate to deepen that toolkit.

Where I see myself helping a CBSA program or operations team: I arrive already trained on GCMS and IRPA, already cleared at Reliability, and already used to national-intake volume, so the usual months of onboarding friction mostly are not there. Inventories exist so managers can pull someone who can contribute early; that is the specific thing I can offer.

For accuracy: my substantive classification is CR-04, with an acting PM-01 at IRCC. I am bilingual English and Arabic with working knowledge of French (not yet SLE tested, so I am applying to English-essential streams), based in the National Capital Region, available on standard internal-mobility timelines, and open to Secret-level screening. Thank you for considering my application across the streams where this profile fits.

Sincerely,

Husam Ahmed
